ROVs – Remotely Operated Vehicles

<http://ageslome.sitesled.com/lbccrov/index.html>

Tech Lead ,IT Infrastructure

February 2009 - March 2009

Chase, Albany, OR

Helped change WaMu systems over to Chase systems. Responsibilities included: inventory control, printer and desk-top removal, printer and desk-top installation, software installation, and new network system installation.

	<p>Quality Inspector March 2007 - February 2009 Nypro, Corvallis, OR Quality Inspector, packager and inventory control (barcode - Access database).</p> <p>Construction Labor / Electrician February 2005 - September 2007</p> <p>Software Engineer September 2004 - February 2005 New Edge Networks, Vancouver, WA Server side development in Java with open source technologies (Ant, xdoclet, JBoss, JUnit &etc). Developed an order status mbean for JBoss which connects with MCI app server and exchanges xml files over https with embedded messages via JAXB. Developed a database to database transfer mbean for JMX environment. Made modifications and additions to an application running on the JBoss server.</p> <p>Software Engineer June 2001 - September 2004 Freelance Designed, developed, &tested document creation &encryption application written in java. Three components each are event-based &therefore run in their own threads. One component is GUI, another encryption and the last is for basic CRUD objects database.</p> <p>Software Developer / Consultant October 2000 - June 2001 DeVine Consulting Union City, CA Built java components for Weblogic and Oracle database. Installed, configured, deployed WebLogic application server and oracle 8i database. Weblogic developer certified. The front end is done using JSP and Servlets, middle tier is done using EJBs, back-end is the Oracle database. Also trained c programmers the basics of java.</p> <p>Software Engineer March 2000 - October 2000 XUMA - San Francisco/CA Built b2b ecommerce solution using the ATG Dynamo Servers. Graphical user interface was done using JHTML &Servlets. Middle tier was done using EJBs. Backend was the Oracle database. The front end was the store front, the middle tier kept track of the buyer, items bought, and updated other company's inventory. Backend stored the buyers and their transactions. Worked on my own. Did analysis, design, and development. I configured, tested, and deployed on my own system. Another person did thorough testing and deployment on client's system.</p>
Education	<p>Keller's Graduate School of Management US - Freelance, CA September 2001 – June 2003 60 graduate credits completed.
